25 August 2026

Claude Skill and Plugin by Alex Labat

Executive Summary

EUHub AI has a technically disciplined multilingual foundation: all 12 strategic pages are crawlable, canonicalized, localized with reciprocal hreflang, and supported by useful schema. The homepage is substantial and commercially clear, while the AI Act guide is already well structured for direct answers. The most urgent uncertainty is index discovery—sampled site searches returned no results—followed by very thin portability pages, limited standalone proof, and uncited high-stakes compliance claims. The clearest growth opportunity is to turn the firm's real implementation expertise into authored, cited, evidence-rich resources and case studies that search engines and AI systems can confidently surface.

Dimension	Score	Status	Key Takeaway
SEO	7/10	On Track	Strong multilingual on-page foundation; visibility, thin inner pages and static caching need attention.
GEO	6/10	On Track	Clear entity and factual signals; authorship, authoritative citations and verifiable evidence are the largest gaps.
AEO	6/10	On Track	The AI Act guide is answer-ready; most other topics lack question-led answers, FAQs and tables.
Combined	19/30	Solid foundation	Prioritize index verification and evidence-rich content before broadening the publishing footprint.

Audit basis: Live HTML crawl on 25 August 2026; homepage, robots.txt, sitemap.xml and llms.txt discovery; 12 meaningful EN/SK/DE pages; 21 unique internal page targets; a sampled web-index search. Legal/policy pages were verified as present and linked but excluded from content scoring, per full-audit scope.

Not measured: Core Web Vitals/field performance, JavaScript runtime behavior, mobile visual rendering, backlink profile, domain authority, conversion analytics and Search Console coverage. Use PageSpeed Insights, Chrome UX Report, Search Console, Bing Webmaster Tools and analytics for those signals.

Pages Audited

All meaningful public pages in the sitemap were audited across the three language variants. Privacy, terms and cookie pages were confirmed but omitted from content scoring.

URL	Page Type	Notes
/en	English homepage	1,155 words; one H1; Organization, WebSite, Person and Service schema; complete social metadata.
/en/ai-act	Compliance guide	538 words; question-led sections; FAQPage, WebPage and BreadcrumbList schema.
/en/data-residency	Trust / compliance	418 words; specific DPA, hosting, transfer and security claims; no source citations.
/en/portability	Service differentiator	166 words; strong checklist framing but materially thin for organic discovery.
/sk	Slovak homepage	1,180 words; localized metadata and schema; one H1; complete hreflang set.
/sk/ai-act	Compliance guide	517 words; localized FAQPage schema and question headings.
/sk/data-residency	Trust / compliance	411 words; strong operational specificity; lacks citations and author/update signals.
/sk/portability	Service differentiator	180 words; title is 56 characters; content remains too shallow.
/de	German homepage	1,072 words; localized metadata and schema; one H1; complete hreflang set.
/de/ai-act	Compliance guide	556 words; localized FAQPage schema and question headings.
/de/data-residency	Trust / compliance	418 words; meta description is 160 characters; no external authoritative references.
/de/portability	Service differentiator	177 words; title is 55 characters; content remains too shallow.

SEO Analysis

7/10 · On Track

Technical On-Page

Signal	Finding	Status
Crawlability	robots.txt allows all public paths, disallows only /private/, and points to the XML sitemap. No robots meta noindex was found on the 12 audited pages.	Good
HTTP status & redirect	All 12 audited pages return 200. The bare domain uses a permanent 308 redirect to /en.	Good
Title tags	All pages have unique localized titles (30–56 characters). Ten of 12 are shorter than the usual 50–60-character target, leaving keyword and value-proposition space unused.	Needs Attention
Meta descriptions	All 12 pages have unique localized descriptions of 141–160 characters. The copy is specific and generally within or near the recommended range.	Good
Heading hierarchy	Every page has exactly one descriptive H1 and logical H2 sections. Homepages use deeper H3 structure; inner guides remain simple and readable.	Good
Canonical tags	Every audited URL has the correct self-referencing canonical.	Good
hreflang	Every page exposes reciprocal EN, SK, DE and x-default alternates. HTML lang values also match each localized URL.	Good
Mobile/ accessibility	Viewport metadata, semantic main/nav landmarks and a skip-to-content link are present. All 51 audited image instances have non-empty alt text.	Good
Internal links	All 21 unique internal page targets discovered in the crawl returned 200. Anchors are descriptive, though discovery relies heavily on the footer and homepage fragments.	Good
Social metadata	og:title, og:description, og:image, og:url and Twitter large-image fields are complete on all 12 pages. og:type is absent.	Needs Attention
Response caching	Static marketing pages return private, no-cache, no-store, max-age=0. This can prevent CDN/browser reuse and should be reviewed against performance goals.	Needs Attention
Sitemap hygiene	The sitemap is valid and includes all three language families, but legal pages receive the same 0.7 priority and monthly change frequency as strategic landing pages.	Needs Attention

Content Quality

Signal	Finding	Status
Homepage depth	Localized homepages contain 1,072–1,180 words and cover pain points, mechanism, capabilities, audiences, delivery, proof, team and conversion.	Good
Guide depth	EU AI Act pages reach 517–556 words. Data-residency pages are 411–418 words, while portability pages are only 166–180 words—well below competitive landing-page depth.	Needs Attention
Topic signals	The site consistently reinforces agentic AI, RAG, ERP/CRM integration, EU AI Act, GDPR, private-cloud/on-premise deployment and vendor portability.	Good
Readability	Short paragraphs, sectional headings, lists, steps and delivery checklists make the content highly scannable.	Good
Freshness	The sitemap has lastmod values, but meaningful pages show no visible publication/update date and no named content owner.	Needs Attention
Search visibility sample	Four web searches using site:ai.euhub.co and exact inner-page patterns returned no results on the audit date. This is a discovery warning, not proof of deindexing; confirm coverage and inspected URLs in Google Search Console and Bing Webmaster Tools.	Needs Attention
Proof content	The homepage names LKW-Control × FAIA and Medical Logistic and explains the five-agent solution. The proof remains a homepage section without a dated standalone case study, client quote, baseline or measured before/after result.	Needs Attention
Editorial footprint	No blog, resources hub or individually authored insight library appeared in navigation or sitemap, limiting long-tail reach and topical authority.	Missing

Structured Data

Signal	Finding	Status
Homepage entity graph	Valid JSON-LD declares Organization, WebSite, three Person entities and a Service with an offer catalog. Legal name, postal address, email, parent organization and individual LinkedIn sameAs links are present.	Good

Signal	Finding	Status
Inner-page markup	All nine strategic inner pages include WebPage and BreadcrumbList markup with localized names, URLs and inLanguage values.	Good
FAQ markup	All three EU AI Act pages include syntactically valid FAQPage markup. The two marked questions match visible content.	Good
Schema completeness	No JSON parse errors were found. Organization lacks its own sameAs links, while content pages lack author, datePublished/dateModified and Article or TechArticle semantics.	Needs Attention
Answer/process schemas	No HowTo or SpeakableSpecification markup was detected. These are optional, but relevant only after equivalent visible answer/process content exists.	Missing

GEO Analysis

6/10 · On Track

E-E-A-T Assessment

Signal	Finding	Status
Organization identity	EUHub AI is linked to Engineers Incubator s.r.o., EUHUB.CO, a full street address and a consistent email through page copy and Organization schema.	Good
People & leadership	Three leaders are visible with roles, photos and LinkedIn links, but surnames are abbreviated and the site provides no bios, track records, qualifications or subject-matter ownership.	Needs Attention
Authorship	The compliance and infrastructure guides have no named author, reviewer or credential line.	Missing
Contact signals	Email and a Slovak postal address are repeated site-wide and encoded in schema. No telephone number is published.	Needs Attention
Policies	Localized privacy, terms and cookie pages exist and every audited page links to them.	Good
Trust evidence	Named partners/clients, a concrete deployment narrative and LinkedIn identities are present. Independent testimonials, certifications, awards, press references and verifiable outcome evidence were not found.	Needs Attention

Content for AI Synthesis

Signal	Finding	Status
Clear claims	Each page states its central promise immediately: operational AI implementation, EU AI Act readiness, EU data residency or no-lock-in portability.	Good
Factual density	The site supplies dates, penalty figures, GDPR articles, infrastructure regions, deployment controls and delivery windows that are easy for an answer engine to extract.	Good
Source citation	No compliance guide links to the EU regulation, European Commission, EDPB or another authoritative source. High-stakes legal and infrastructure claims therefore lack citation support.	Missing

Signal	Finding	Status
Comprehensiveness	The AI Act guide covers applicability, risk, transparency, deliverables, dates and penalties. Portability pages do not answer implementation, migration, ownership, SLA, export-format or handover questions in enough depth.	Needs Attention
Entity clarity	EUHub AI, its legal entity, parent brand, people, services and operating geography are consistently identified.	Good
Originality	The FAIA five-agent story, diagnostic-first delivery model and deployment checklist create a distinct point of view, but results are partly projected or simulated rather than independently evidenced.	Needs Attention
Freshness & provenance	No visible updated dates, authors or reviewers appear on information that changes with regulation and infrastructure practice.	Missing

Technical GEO

Signal	Finding	Status
HTTPS & headers	HTTPS, HSTS, nosniff, SAMEORIGIN and a restrictive permissions policy are active. The Content Security Policy is report-only rather than enforced.	Good
Server-readable HTML	All audited content, headings, navigation and JSON-LD are present in the fetched HTML; the Next.js frontend is not hiding core copy behind client-only rendering.	Good
AI crawl access	robots.txt allows all public pages with no AI-crawler exclusions. /private/ is the sole disallowed path.	Good
llms.txt	A concise English llms.txt exists and summarizes the brand, services, compliance pages and contact details. It omits SK/DE alternatives and evidence/case-study resources.	Good
Entity links	Person sameAs links point to LinkedIn. The Organization entity has no company-level sameAs profiles or other authoritative entity references.	Needs Attention
Structured depth	Organization, Person, Service, WebPage, BreadcrumbList and FAQPage are useful foundations; authorship, dates and content-specific semantics are the main missing layers.	Needs Attention

AEO Analysis

6/10 · On Track

Featured Snippet Eligibility

Signal	Finding	Status
Direct answers	All strategic inner pages place a concise proposition directly under the H1. AI Act question sections answer immediately in extractable prose.	Good
Question headings	The AI Act pages use two primary natural-language questions. Homepage, data-residency and portability sections are mostly declarative.	Needs Attention
Definitions	Core offers are described clearly, but few sections use concise definition patterns such as “EU data residency is...” or “Vendor-neutral AI means...”.	Needs Attention
Lists and steps	Every audited page uses lists; the homepage also exposes Audit → Pilot → Scale and delivery checklists that suit list snippets.	Good
Tables	No HTML comparison or decision table was found on any of the 12 pages, despite strong table opportunities around AI Act risk, deployment models and portability.	Missing

Structured Answer Formats

Signal	Finding	Status
FAQPage schema	The three AI Act pages mark up two visible questions each with acceptedAnswer content.	Good
FAQ coverage	Data residency, portability, implementation, security, pricing, timeline and procurement questions are not organized into FAQ blocks or marked up.	Needs Attention
HowTo content	The delivery process is described in steps, but no dedicated how-to page or HowTo markup exists. Markup should only follow genuinely instructional visible content.	Needs Attention
Speakable markup	No SpeakableSpecification was found. This is optional and should be limited to carefully selected concise answer sections if adopted.	Missing

Voice Search Readiness

Signal	Finding	Status
Conversational language	Copy is direct, plain and buyer-oriented across English, Slovak and German.	Good
Long-tail coverage	The AI Act page covers applicability and risk questions. Equivalent who/what/how/which questions are sparse for services, data location, deployment choice and migration.	Needs Attention
Local signals	Name, postal address and email are available and Organization schema includes a PostalAddress. A phone number and dedicated location/service-area content are absent.	Needs Attention
Multilingual answers	The same answer architecture is consistently localized across EN/SK/DE with matching hreflang and lang attributes.	Good

Priority Recommendations

Sequenced by likely organic/AI-discovery impact, evidence gap and implementation effort.

Priority	Issue / Action	Dimension	Effort	Impact
Critical	Open Google Search Console and Bing Webmaster Tools: submit the sitemap, inspect /en plus all nine strategic inner pages, request indexing, and resolve any discovered/crawled/canonical exclusion. The audit's sampled site searches returned no results.	SEO	Medium	Very High
High	Expand each portability page from 166–180 words to roughly 600–900 useful words with ownership terms, export formats, migration sequence, handover artifacts, model-switching example, FAQs and a comparison table.	SEO · GEO · AEO	Medium	High
High	Add inline links to the EU AI Act text, European Commission guidance, EDPB/GDPR materials and SCC sources; show a visible reviewed/updated date on compliance claims.	GEO · SEO	Low	High
High	Publish a standalone, indexable LKW-Control × FAIA case study with client-approved quote, baseline, measured outcome, timeframe, architecture, constraints and methodology; label simulated/projected metrics unambiguously.	GEO · SEO	High	High
High	Create full leadership profiles with full names, relevant expertise, past work, credentials, speaking/writing links and responsibility for content review. Connect them through Person and author/reviewer schema.	GEO	Medium	High
Medium	Expand data-residency pages beyond 411–418 words with a subprocessor summary, architecture diagram, deployment-option table, retention matrix, audit evidence and answers to procurement questions.	SEO · GEO · AEO	Medium	High
Medium	Build a small expert resource hub around implementation ROI, AI Act controls, RAG security, ERP/CRM integration and model portability; assign authors, dates and Article/TechArticle markup.	SEO · GEO	High	High

Priority	Issue / Action	Dimension	Effort	Impact
Quick Win	Turn buyer questions into visible 40–60-word answers and scoped FAQ blocks on data residency, portability and the homepage; add FAQPage only where visible Q&A meets search-engine eligibility rules.	AEO	Low	Medium
Quick Win	Lengthen short title tags with specific intent and geography where natural; add og:type and a company-level sameAs array. Keep localized titles distinct.	SEO · GEO	Low	Medium
Quick Win	Review no-store/private caching on static marketing pages, then measure CWV with PageSpeed Insights/Search Console field data before and after any cache change.	SEO	Low	Medium
Medium	Add concise decision tables for AI Act risk tiers, EU-only vs private-cloud vs on-premise deployment, and portable vs locked-in architecture.	AEO · GEO	Medium	Medium
Quick Win	Add company social profiles to Organization.sameAs and publish a business phone only if it is genuinely staffed; extend llms.txt with localized page families and the future evidence hub.	GEO · AEO	Low	Medium

What's Working Well

These are genuine strengths observed in the live crawl and should be preserved through future changes.

Strength	Evidence
Multilingual architecture	Reciprocal EN/SK/DE/x-default hreflang, localized canonicals, matching HTML lang and consistent page families across all 12 audited URLs.
Crawlable HTML	Every audited page returned 200 with its core copy, headings, links and JSON-LD present in server-readable HTML.
Indexing controls	robots.txt is permissive, the sitemap is discoverable, and no accidental noindex directive was found.
Metadata coverage	Unique title and description tags, complete Open Graph/Twitter image fields and correct self-canonicals exist across the full strategic set.
Schema foundation	Homepage entity graph connects Organization, WebSite, Person and Service; inner pages add WebPage/BreadcrumbList; AI Act adds FAQPage.
Content clarity	The homepage communicates audience, pain, mechanism, deliverables, proof and conversion in 1,000+ words in every language.
Compliance specificity	AI Act dates/penalties and data-residency deployment/DPA controls give answer engines extractable facts instead of vague positioning.
Accessible images	All 51 image instances audited have non-empty alt text, including partner logos and leadership photos.
Link integrity	All 21 unique internal page targets found during the crawl returned 200.
AI discovery	llms.txt provides a concise machine-readable summary of services, compliance topics and contact information.

Glossary

Term	Plain-English Definition
SEO	Search Engine Optimization improves crawlability, relevance and authority so pages can rank in traditional organic search results.
GEO	Generative Engine Optimization makes content clear, factual, authoritative and entity-rich so AI search systems can understand, synthesize and cite it.
AEO	Answer Engine Optimization structures direct answers, lists, tables and question-led content for featured snippets, People Also Ask and voice/assistant responses.
E-E-A-T	Experience, Expertise, Authoritativeness and Trustworthiness—the people, evidence, transparency and reputation signals supporting a site's claims.
hreflang	Markup that tells search engines which language or regional version of a page should be served to a user.
Canonical	A tag naming the preferred URL for a page, helping consolidate duplicate or alternate URL signals.
Structured data	Machine-readable schema markup that describes organizations, people, services, pages, FAQs and other entities or relationships.

Recommended next checkpoint

Re-run the crawl after index coverage is confirmed and the portability/citation work is live. Compare Search Console impressions, indexed-page count and query growth—not just the audit score.
