AEO

6/10

Needs Work

Audit date: 25 August 2026
Independent live-site reassessment

Executive Summary

EUHub AI has a solid multilingual technical foundation: every one of the 21 sitemap URLs returned 200, carries a self-referencing canonical and complete EN/SK/DE/x-default alternate set, and the three homepages provide more than 1,100 crawlable words. The decisive finding is operational: the public site has not yet received the completed SEO/GEO/AEO implementation branch. All 21 live HTML responses remain private/no-store, and the data-residency and portability pages are still thin, lack semantic article structure and do not expose matching FAQ schema. The first priority is a controlled deployment followed by the live smoke gate—not a new content strategy.

Dimension	Score	Status	Key takeaway
SEO	7/10	On Track	Strong metadata, sitemap and hreflang; live cache and content deployment gap remain.
GEO	6/10	Needs Work	Clear entity/service signals, but approved expert bylines, source-led guides and proof remain limited live.
AEO	6/10	Needs Work	AI Act FAQPage is useful; other guides are too short and lack structured answer formats.
Combined	19/30	Needs Attention	The implementation exists on the feature branch but is not live.

Pages Audited

Full crawl: all 21 URLs declared in the live XML sitemap. The nine legal-policy URLs were checked for indexability and internationalization; the twelve home and strategic-guide URLs received content, schema and answer-format analysis.

URL	Page type	Live observation
https://ai.euhub.co/en	Homepage	1,293 words; Organization, Person, Service schema; private/no-store
https://ai.euhub.co/sk	Homepage	1,318 words; localized metadata/schema; private/no-store
https://ai.euhub.co/de	Homepage	1,196 words; localized metadata/schema; private/no-store
https://ai.euhub.co/en/ai-act	Compliance guide	656 words; FAQPage; no semantic article; private/no-store
https://ai.euhub.co/sk/ai-act	Compliance guide	644 words; FAQPage; no semantic article; private/no-store
https://ai.euhub.co/de/ai-act	Compliance guide	664 words; FAQPage; no semantic article; private/no-store
https://ai.euhub.co/en/data-residency	Compliance guide	509 words; no FAQPage/article; private/no-store
https://ai.euhub.co/sk/data-residency	Compliance guide	502 words; no FAQPage/article; private/no-store
https://ai.euhub.co/de/data-residency	Compliance guide	495 words; no FAQPage/article; private/no-store
https://ai.euhub.co/en/portability	Buyer guide	251 words; no FAQPage/article/table; private/no-store
https://ai.euhub.co/sk/portability	Buyer guide	264 words; no FAQPage/article/table; private/no-store
https://ai.euhub.co/de/portability	Buyer guide	247 words; no FAQPage/article/table; private/no-store
https://ai.euhub.co/en/privacy	Legal	Indexable, localized alternate set; private/no-store
https://ai.euhub.co/sk/privacy	Legal	Indexable, localized alternate set; private/no-store

SEO Analysis

Technical On-Page

Signal	Finding	Status
Crawlability	robots.txt allows crawling, declares the sitemap and only disallows /private/. All 21 sitemap URLs returned HTTP 200.	Good
International SEO	Every audited URL exposes matching html lang plus EN/SK/DE/x-default alternates; the sitemap also carries xhtml:link alternates.	Good
Canonical and metadata	The live smoke audit found no missing title, description or canonical, and no canonical mismatch across all 21 URLs.	Good
Caching / rendering	Every live marketing response returns cache-control: private, no-cache, no-store, max-age=0, must-revalidate. This is the old dynamic behavior.	Needs Attention
Sitemap freshness	Sitemap lastmod values remain 2026-07-21 for every URL, including pages that will materially change on deployment.	Needs Attention
Security headers	HTTPS, HSTS, nosniff, SAMEORIGIN and a report-only CSP are present. The CSP is not yet enforced.	Needs Attention

Content Quality

Signal	Finding	Status
Homepage depth	EN/SK/DE homepages have 1,293 / 1,318 / 1,196 visible words respectively, with useful section hierarchy and internal routes.	Good
AI Act depth	EN/SK/DE pages have 656 / 644 / 664 words with question-led H2s and a visible FAQ pattern.	Good
Data residency depth	EN/SK/DE pages have 509 / 502 / 495 words. They are below the 700-word minimum established for strategic compliance pages.	Needs Attention
Portability depth	EN/SK/DE pages have only 251 / 264 / 247 words, well below the 700-word strategic-guide floor.	Missing
Freshness and bylines	No live reviewed/updated dates or approved full author/reviewer identities were found on the high-stakes guide pages.	Needs Attention

Structured Data

Signal	Finding	Status
Homepage entity graph	Organization, PostalAddress, WebSite, Person, Service, Place, OfferCatalog and Offer JSON-LD are present across the localized	Good

ai.euhub.co		SEO / GEO / AEO Audit Report
	homepages.	
AI Act answers	Each AI Act locale contains parseable FAQPage, Question and Answer schema alongside WebPage and BreadcrumbList.	Good
Other strategic guides	Data-residency and portability only expose WebPage/Organization/BreadcrumbList; no visible FAQ schema was found.	Needs Attention
Schema syntax	The live smoke check parsed JSON-LD successfully across the entire sitemap.	Good

GEO Analysis

E-E-A-T Assessment

Signal	Finding	Status
People and organization	The homepage names three team members by initial and role and includes LinkedIn links, a Slovak address and hello@euhub-ai.com.	Good
Expert identity	Initials and broad roles are weaker than approved full names, biographies, credentials, stable profile pages and reviewer relationships for compliance content.	Needs Attention
First-party proof	The live homepage includes a concrete LKW-Control × FAIA engagement narrative, but it lacks a standalone, approved evidence page with methodology or attributable measurement.	Needs Attention
Contact and entity consistency	EUHub AI, its contact email and Banská Bystrica address are consistently present. No assessment of external profile consistency was possible from the crawl.	Good

Content for AI Synthesis

Signal	Finding	Status
Claim clarity	The homepage clearly states its implementation and diagnostic proposition; the guide pages lead with concise topic framing.	Good
Factual source trail	The live data-residency and portability pages do not expose external primary-source citations. AI Act content includes dates and duties but lacks visible source links.	Needs Attention
Originality	The live FAIA narrative and simulated example are useful differentiators; simulations are labeled, which avoids representing them as delivered outcomes.	Good
Machine-readable discovery	llms.txt is present and accurately routes crawlers to services and the three compliance guides. It is a supplementary discovery file, not a ranking signal.	Good

Technical GEO

Signal	Finding	Status
Crawlable HTML	The site serves full server-rendered HTML and allows crawling; no JavaScript-only content barrier was observed.	Good
Cache efficiency	No-store HTML can increase repeated origin work and is inconsistent with a stable marketing-content delivery model.	Needs Attention
Brand graph	Organization/Person schema and LinkedIn links provide a starting entity	Needs Attention

ai.euhub.co	SEO / GEO / AEO Audit Report
	graph; legal identity, logo and verified sameAs data need approval before expansion.

AEO Analysis

Featured Snippet Eligibility

Signal	Finding	Status
Direct answers	The pages frame topics clearly, but the live data-residency and portability pages lack 40–60 word answer blocks followed by comprehensive decision support.	Needs Attention
Question coverage	AI Act uses seven question-led headings in each locale. Data residency uses descriptive headings; portability mostly uses statement headings.	Needs Attention
Lists and tables	Homepages use useful deliverable lists. None of the six live data-residency/portability pages contains a comparison table.	Missing
Conversational language	The AI Act FAQs and contact language are readable and direct across all three locales.	Good

Structured Answer Formats

Signal	Finding	Status
FAQPage	Present and aligned to the AI Act guide family only.	Good
FAQ coverage	No live FAQPage is present on data-residency or portability despite their buyer-question potential.	Missing
Semantic article structure	None of the nine live strategic guide pages has an article landmark. The completed branch adds this structure.	Needs Attention
Speakable / HowTo	Not found. Their absence is not an issue unless the site publishes genuinely suitable visible content.	Good

Priority Recommendations

Priority	Issue	Dimension	Effort	Impact
Critical	Deploy branch feat/seo-geo-aeo-10of10. The live site is serving the older implementation: all 21 URLs are private/no-store and the enhanced guide content is absent.	SEO / GEO / AEO	Low	Very high
High	Run the post-deploy smoke gate against ai.euhub.co and resolve it before IndexNow submission. The live run currently reports 42 failures.	SEO	Low	Very high
High	Secure fluent human editorial and legal review of the EN/SK/DE compliance-guide content and citations before publishing the	GEO / AEO	Medium	High

ai.euhub.co		SEO / GEO / AEO Audit Report		
	already-prepared material.			
High	Verify Search Console and Bing ownership, submit the sitemap, and inspect strategic EN/SK/DE URLs after deployment.	SEO / GEO	Medium	High
Medium	Publish only approved author/reviewer identities, reviewed dates and evidence notes; do not manufacture credentials or client outcomes.	GEO	Medium	High
Medium	Measure field Core Web Vitals in Search Console/CrUX and mobile lab performance in PageSpeed Insights once its public quota is available.	SEO	Low	Medium
Quick Win	Replace the sitemap's static July lastmod values with genuine content modification dates when the guides ship.	SEO	Low	Medium

What's Working Well

- All 21 sitemap URLs returned 200 and passed title, description, canonical, hreflang, html-language, image-alt, JSON-LD parseability and internal-link checks.
- The EN/SK/DE sitemap architecture is clean and reciprocal, with in-page and sitemap-level language alternates.
- The homepage has substantial, differentiated service content, organization/person/service schema, a physical address, email contact and a concrete engagement narrative.
- The AI Act family already has visible question-led content and matching FAQPage markup.
- Robots.txt and llms.txt are present, readable and aligned with the public information architecture.

Measurement Limits and 10/10 Gate

This audit measured live HTML, headers, sitemap/robots/llms files and a full 21-URL integration smoke check on 25 August 2026. It did not measure backlinks, Search Console coverage, Bing ownership, field Core Web Vitals, rich-result eligibility, or citations in ChatGPT Search, Perplexity, Gemini or Google AI features. The public PageSpeed endpoint returned a quota-exceeded response during this audit; no performance score is inferred.

The live site should not claim 10/10 yet. The feature branch contains the technical and content changes needed to address the biggest live defects, but deployment, human legal/native-language review, approved public identities, client evidence, indexation evidence and field performance evidence are still required.

Glossary

SEO

Search engine optimization: making pages easy to crawl, understand, index and rank in conventional search.

GEO

Generative engine optimization: publishing clear, sourced, trustworthy material that AI-powered search systems can accurately synthesize and cite.

AEO

Answer engine optimization: structuring visible content so search and voice systems can extract concise, useful answers, lists and comparisons.
