SEO / GEO / AEO Audit Report

FULL AUDIT · FINAL PRODUCTION

SEO 9/10 <i>Strong</i>	GEO 8/10 <i>Strong</i>	AEO 9/10 <i>Strong</i>
--	--	--

Audit date: 25 August 2026
Verified against the final live production revision

Executive Summary

EUHub AI now has a strong, production-verified multilingual search foundation. All 21 sitemap URLs return 200 and pass the automated metadata, canonical, hreflang, language, image-alt, internal-link and JSON-LD checks. Marketing HTML is statically generated and publicly cacheable; the former thin data-residency and portability pages are now 841–1,010 words with semantic articles, accessible decision tables, six visible FAQs per locale and matching FAQPage schema. Mobile Lighthouse scored SEO 100 and performance 96. The remaining distance to an evidence-backed 10/10 is primarily authority and external validation: public author/reviewer credentials, broader primary-source coverage, approved standalone case evidence, Search Console/Bing indexation data and field Core Web Vitals.

Dimension	Score	Status	Key takeaway
SEO	9/10	Strong	Technically excellent; external indexation and field CWV evidence remain.
GEO	8/10	Strong	Source-led content improved; expert identity and original proof need expansion.
AEO	9/10	Strong	Direct answers, questions, tables and matching FAQ schema are live.
Combined	26/30	Strong	Near the target without overstating unverified authority signals.

Before vs After

Signal	Before	Final production
Live smoke failures	42	0
HTML caching	21/21 private/no-store	21/21 public s-maxage
Residency depth	495–509 words	841–998 words
Portability depth	247–264 words	843–1,010 words
Strategic article landmarks	0 of 9	9 of 9
Guide comparison tables	0	6
FAQPage guide families	AI Act only	AI Act, residency, portability
IndexNow	Not run for failed release	Production workflow passed

Pages Audited

Full live crawl of every URL in sitemap.xml. Legal pages were checked for technical integrity; the twelve home and strategic pages received deeper content, authority and answer-format analysis.

URL	Page type	Final live evidence
/en	Homepage	1,293 words; Organization, Person, Service schema
/sk	Homepage	1,318 words; localized entity graph
/de	Homepage	1,196 words; localized entity graph
/en/ai-act	AI Act guide	636 words; article + FAQPage
/sk/ai-act	AI Act guide	624 words; article + FAQPage

ai.euhub.co		Final SEO / GEO / AEO Audit
/de/ai-act	AI Act guide	644 words; article + FAQPage
/en/data-residency	Residency guide	998 words; table, 6 FAQs, 4 sources
/sk/data-residency	Residency guide	884 words; table, 6 FAQs, 4 sources
/de/data-residency	Residency guide	841 words; table, 6 FAQs, 4 sources
/en/portability	Portability guide	1,010 words; table + 6 FAQs
/sk/portability	Portability guide	894 words; table + 6 FAQs
/de/portability	Portability guide	843 words; table + 6 FAQs
/en/privacy	Legal	200; metadata/schema/hreflang clean
/sk/privacy	Legal	200; metadata/schema/hreflang clean

/sk/cookie	Legal	200; metadata/schema/hreflang clean
/de/cookie	Legal	200; metadata/schema/hreflang clean

SEO Analysis

Score: 9/10 · Strong

Technical On-Page

Signal	Finding	Status
Crawl and status	21/21 sitemap URLs return 200. robots.txt allows public crawling and declares the canonical sitemap.	Good
Metadata	21/21 have a title, description, canonical, Open Graph and Twitter Card set.	Good
International SEO	21/21 have matching html lang plus reciprocal EN/SK/DE/x-default alternates in HTML and sitemap.	Good
Semantic structure	Every page has exactly one H1; all nine strategic guides now render as articles.	Good
Caching	All audited HTML returns s-maxage=31536000 instead of private/no-store.	Good
Security	HTTPS, HSTS, nosniff and SAMEORIGIN are active; CSP remains report-only.	Needs Attention

Content Quality

Signal	Finding	Status
Homepage depth	Localized homepages contain 1,196–1,318 visible words with clear service, proof, team and contact sections.	Good

ai.euhub.co		Final SEO / GEO / AEO Audit
Guide depth	Residency and portability contain 841–1,010 words. AI Act pages contain 624–644 words and focused questions.	Good
Readability	Short paragraphs, meaningful section headings, lists, FAQs and responsive tables make the content scannable.	Good
Freshness	Strategic guides do not yet display reviewed dates; sitemap lastmod currently reflects builds rather than editorial dates.	Needs Attention

Performance and Structured Data

Signal	Finding	Status
Mobile Lighthouse	Performance 96, SEO 100, accessibility 92, best practices 96. FCP 1.1s, LCP 2.6s, TBT 100ms, CLS 0.	Good
Schema validity	21/21 contain parseable JSON-LD. Homepages expose Organization/Person/Service/WebSite; guides expose WebPage/Breadcrumb/FAQPage.	Good
Field CWV	CrUX/Search Console field evidence was not available in this audit; lab results cannot substitute for 75th-percentile field data.	Needs Attention

GEO Analysis

Score: 8/10 · Strong

E-E-A-T Assessment

Signal	Finding	Status
Organization clarity	EUHub AI is consistently identified with address, email, service scope, Person nodes and LinkedIn profile links.	Good
Expert identity	Team roles are public, but high-stakes guides lack approved full author/reviewer bylines, credentials and reviewed dates.	Needs Attention
First-party experience	The homepage contains the LKW-Control × FAIA engagement narrative and clearly labels simulated metrics/examples.	Good
Case evidence	Proof is embedded on the homepage; standalone approved methodology/outcome pages are not yet available.	Needs Attention

Content for AI Synthesis

Signal	Finding	Status
Clear claims	Each guide leads with a direct explanation and maintains consistent EUHub AI entity naming.	Good
Primary sources	Residency guides link four authoritative sources including EUR-Lex, the European Commission and EDPB.	Good
Source coverage	AI Act and portability guides still lack visible primary-source lists.	Needs Attention
Discovery	robots.txt, sitemap.xml and llms.txt are accessible. IndexNow completed after the final release.	Good
AI visibility benchmark	No verified citation/mention dataset exists yet across Google AI features, ChatGPT Search, Perplexity and Gemini.	Needs Attention

AEO Analysis

Score: 9/10 · Strong

Answer Formats

Signal	Finding	Status
Direct answers	Residency and portability open with concise definition-style summaries before deeper sections.	Good
Natural questions	Each enriched guide exposes six conversational FAQ questions; AI Act uses question-led sections.	Good
Tables	All six residency/portability pages include a real table with a caption and scoped column headers.	Good
Lists	Procurement evidence, deployment controls and handover requirements are expressed as extractable lists.	Good
FAQ alignment	Visible FAQs and FAQPage JSON-LD are generated from the same typed content source.	Good
Voice/local signals	Conversational language, Slovak address and email are present; phone data is absent and should not be invented.	Needs Attention

Priority Recommendations

Priority	Issue	Dimension	Effort	Impact
High	Verify Search Console and Bing properties; submit sitemap and record URL Inspection/index coverage for all language families.	SEO / GEO	Medium	High
High	Publish approved full author/reviewer identities, credentials and reviewed dates on high-stakes guides.	GEO	Medium	High
High	Add reviewed primary sources to AI Act and portability content; keep schema synchronized with visible content.	GEO / AEO	Medium	High
Medium	Publish three client-approved standalone case studies or evidence notes with methodology and attributable outcomes.	GEO	High	High
Medium	Collect field Core Web Vitals and remediate any page group that misses LCP/INP/CLS targets.	SEO	Medium	Medium
Quick Win	Use genuine editorial modification dates in sitemap entries instead of the build timestamp.	SEO	Low	Medium
Quick Win	Make the editorial policy publicly discoverable after legal/editorial approval.	GEO	Low	Medium

What's Working Well

- The final production smoke test passes every one of the 21 sitemap URLs.
- Mobile Lighthouse reports SEO 100 and performance 96, with CLS 0 and TBT 100ms.
- Multilingual canonicals, lang attributes and

reciprocal hreflang are complete in both page HTML and sitemap XML. • Strategic guide depth and answer extraction improved materially without padding: semantic articles, direct answers, useful tables, FAQs and matching schema are live. • Claims remain disciplined: simulated examples are labeled, and unsupported authors, credentials, phone numbers and client outcomes were not fabricated.

10/10 Evidence Gate

A score of 10/10 should be claimed only after external evidence closes the remaining gaps: verified Search Console/Bing coverage; sufficient CrUX field data; approved authors/reviewers and reviewed dates; expanded primary-source coverage; three approved standalone evidence notes; verified organization identity/sameAs facts; and a repeatable monthly AI citation benchmark. Rankings, rich results and AI citations cannot be guaranteed by technical implementation alone.

Glossary

SEO

Search engine optimization: technical and editorial work that helps conventional search engines crawl, understand, index and rank a site.

GEO

Generative engine optimization: clear, authoritative and source-backed content that AI-powered search systems can synthesize and cite accurately.

AEO

Answer engine optimization: visible content structures—direct answers, questions, lists and tables—that search and voice systems can extract reliably.
